

Deutschlandfonds – a booster for private investment

- The recently launched Deutschlandfonds is a flagship project of the government to mobilise private investment in targeted sectors. The government will provide around EUR 30 bn, mostly in the form of guarantees, with a goal of stimulating total investments of around EUR 130 bn.
- The fund brings together existing and new investment promotion programmes that cater to startups, manufacturing companies, and the utility sector. It has a clear focus on the energy sector to support the ecological transformation of the economy, but will also support critical areas such as deeptech, AI, defence, and the automotive industry.
- The Deutschlandfonds provides a welcome booster for private investment and will help to close existing financing gaps. Nevertheless, structural reforms remain key to reinvigorate investments across all industries.

Ursula Walther

Research Associate

The new Deutschlandfonds (“Germany fund”) went live shortly before Christmas. It is a flagship project of the government to mobilise private investment in German industry, the startup sector, and energy infrastructure. The fund complements the public investment offensive via the EUR 500 bn off-budget fund for infrastructure and climate neutrality, which is not primarily targeting the investment needs of German businesses. The government will provide approximately EUR 30 bn, mostly in the form of guarantees, with the goal of stimulating total investments of around EUR 130 bn.

What is new? Acting as a central platform, the Deutschlandfonds brings together existing and new investment promotion programmes that cater to startups, manufacturing companies, and the utility sector (Figure 1):

- In **startup financing**, the Zukunftsfonds is to be reinforced and complemented by two additional instruments. First, the “scale-up direct” facility allows the public development bank KfW to directly co-invest in mature scaleups, with the aim of keeping them in Germany. A first investment in a defence-tech company has already been made. The facility addresses an important gap in startup financing given that German scaleups often have to rely on foreign investors in larger funding rounds (as we noted [here](#)). This bears a risk that these ventures relocate abroad. Second, the “first-of-a-kind loan” facility tackles another financing gap by funding novel technologies. These technologies typically require large investments and face uncertain prospects of success, e.g. financing prototypes in deeptech sectors such as space or nuclear energy.

- For the **industrial sector**, the fund establishes a new hedging instrument for transformation technologies. The goal is to unlock investments in projects like battery storage facilities, hydrogen or carbon capture usage and/or storage (CCU/S) by providing financial guarantees. Moreover, an upcoming securitisation programme aims to facilitate bank lending to SMEs in the future. The KfW would acquire mezzanine tranches.
- For the **utility sector**, the Deutschlandfonds makes available loans at favourable conditions for geothermal projects. Two additional programmes are envisaged to stimulate investments in renewable energy, grids and the heating network.

Figure 1: Structure of the new Deutschlandfonds

Target group	Programme	Status	Start	Details	Sectors in focus	Volume
Startups and scaleups	Scale-up Direct	New	Dec-25	Direct equity investment in scaleup companies (max. 50% stake and EUR 50 m) with the aim of retaining them in Germany		EUR 1 bn till 2030
	First-of-a-kind loans	New	Dec-25	Investment in private venture capital (VC) funds that finance novel/"first-of-a-kind" technologies with high investment needs and risks	Deeptech	EUR 0.3 bn
	Strengthening the Zukunftsfonds	Existing	Dec-25	Bundling modules within the Zukunftsfonds to strengthen the financing of key technologies, investment in private VC funds of up to EUR 50 m	Deeptech, AI, biotech, cleantech, defence	EUR 2 bn
In the course of 2026				Topping up the Zukunftsfonds		Tbd
Industry and Mittelstand	Hedging instrument for transformation industries	New	Dec-25	Providing financial guarantees for manufacturers and suppliers of innovative and sustainable technologies	Energy, automotive	EUR 8 bn of guarantees
	Raw materials fund	Existing	Oct-25	Providing capital for investments in projects related to mining, processing, and recycling of critical raw materials	Critical raw materials	EUR 1 bn for 2024-28
	Securitisation	New	In the course of 2026	Purchasing of mezzanine tranches with the aim of facilitating bank lending to SMEs		Tbd
Utility companies	Loans for geothermal projects	New	Dec-25	Subsidised loans (up to EUR 25 m) and insuring the exploration risk	Energy	EUR 0.65 bn, mostly guarantees
	Renewable Energies Plus loans	New	In the course of 2026	Subsidised loans	Energy	Tbd
	Investment / syndicated loans	New	In the course of 2026	Loans with partial assumption of banks' credit risk	Energy	Tbd

Source : KfW, Deutsche Bank Research

Which sectors will benefit? The energy sector is a clear focus, as the fund aims to support the ecological transformation of the economy. This includes promoting technologies such as renewable energies (e.g. solar, wind, hydrogen), energy storage (e.g. batteries), CCU/S as well as electricity grids and heating networks. The automotive sector may benefit as well. Moreover, the fund is supposed to facilitate innovation in critical areas such as deeptech, AI, biotech, cleantech, and defence.

Timeline. The new tools for industrial transformation, geothermal energy, and startups became operational as of December 18. Further modules are envisaged for 2026. These include cheap loans for modernising the energy infrastructure, additional financing options for startups and scaleups, notably in the defence industry, and an expansion of the Zukunftsfonds. The government is also considering a new module for the construction sector.

Administration. KfW will coordinate all components of the Deutschlandfonds, channel public funding and provide guarantees on behalf of the federal government. It is also the central point of contact for any potential private investor.

Implications for the federal budget. The government has pledged EUR 30 bn for the Deutschlandfonds. However, 95% of that are guarantees that only become cash outflows if called upon. The required funds have been allocated with the 2025 and 2026 budgets, according to Finance Minister Klingbeil.¹ So far, almost half of the amount (about EUR 13 bn) has been made available, to be used over several years.

Assessment. Given years of restrained private investment and immense financing needs for regaining competitiveness, catching up in new technologies, and advancing the digital and green transition, the Deutschlandfonds provides a welcome booster. Its targeted programmes will help to close existing gaps in the financing of transformation technologies and startups. However, the structure with its different modules and programmes is rather complex, potentially involving significant administrative work, and entails the risk that the public means become too scattered to have a meaningful impact in the various areas. It also implies no broad-based relief for the corporate sector as a whole, beyond the selected industries. More importantly, the actual effect will strongly depend on whether the tools indeed succeed in crowding-in private investments. The first projects supported by the raw materials fund provide an encouraging [example](#). Public investment of EUR 150 m helped to unleash total investment of EUR 2.2 bn in a lithium extraction project in Germany. Other initiatives like the recently adopted “location promotion act”² will complement the Deutschlandfonds to improve the framework for private investments in Germany.

Fundamentally, better access to finance is clearly a positive. Yet other factors are often seen as bigger obstacles to private investment in Germany:³ stifling bureaucracy; high taxes, cost of labour and energy; lack of qualified labour; growing barriers to international trade. The government has started to tackle some of these too, e.g. with the “investment booster”⁴ and two roadmaps for a [digitalised public administration](#) and [streamlined processes](#), but it still has a long way to go. In other areas like labour costs, there has been no progress, with social security contributions and minimum wages rising. In the end, to reinvigorate growth, doing business in Germany must become easier and more profitable. Therefore, structural reforms remain crucial to unlock private investment beyond the booster provided by the Deutschlandfonds.

1 Press conference on the launch of the Deutschlandfonds on December 18, 2025.

2 The “location promotion act” (Standortfördergesetz) aims to facilitate investment in venture capital, renewable energies and infrastructure through simplified rules and a more favourable tax treatment for investment funds. Moreover, it improves access to equity capital markets by lowering the minimum nominal value of shares from EUR 1 to EUR 0.01.

3 [EIB \(2025\)](#). EIB investment survey 2025. Germany. December 9.

4 The “investment booster act” includes accelerated depreciation for new equipment and electric vehicles, an expanded R&D tax credit, and a reduced corporate tax rate starting from 2028.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively 'Deutsche Bank'). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (<https://research.db.com/Research/>), and can be found on the general coverage list and also on the covered company's page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (<https://research.db.com/Research/>) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options', at <https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document>. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at <https://research.db.com/Research/> on each company's research page or under the 'Disclosures' tab. Investors are strongly encouraged to review this information before investing.

research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG.

It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
